No.SI/MISC/1193/84-I

Dated 16.05.1987

PUBLIC NOTICE NO. 13 /87-(APPRAISEMENT)

SUBJECT: CLASSIFICATION OF CONING OILS

The assessment of coning oil used in the manufacture of man-made fiber & yarn is under dispute for some time. Coning oil is composed of mineral oils (more than 70%), emulsifying agents and anti-static agents and have flash point above 200 Degree of Fahrenheit's thermometer. These products prevent diversion of filament and have gliding and anti-static properties which ensures un-realing and smooth thread running during the processing of yarn

The textile oils having mineral oil contents more than 70% fall for classification under heading 27.10 by virtue of para C (2) page 201 of Explanatory Notes to the Customs Cooperation Council Nomenclature (CCCN). It is, therefore, circulated for information of the trade that Coning Oil having mineral oil contents not less than 70% and used in the processing of man-made fiber / yarn is classifiable under heading 27.10H02.
